

ELS100

Compact Optical Storage Appliance

ELS-100 active archive optical storage for secure long-term retention with fast access through cache, browser, and S3 workflows.

Active archive storage tier

Designed to keep important data accessible while preserving it on optical media for resilient long-term storage and lower operating cost.

Standard S3 interface for object-based application integration
Cache or hot-warm tier supports quick access and restore workflows
Optical media provides durable, tamper-resistant long-term retention

65 TB

Max capacity with 1TB media

100

Maximum media

Up to 4

Addressable drives

n/a

Footprint

160W

Typical energy

What it is built for

Edge, lab, departmental, or branch-office archive
Small evidence, records, imaging, and project repositories
Compact active archive with a cache-first access model
Pilot deployments before scaling to larger ELS systems

Active archive model

Ingest -> Cache -> Write Strategy -> Optical -> Restore

Savartus keeps users working through the cache or hot-warm tier while write strategies move data to optical storage for durable retention.

Capacity profile

16 TB

200GB media

32 TB

500GB media

65 TB

1TB media

Why Savartus ELS

Disk-level access model with optical-grade retention
Standard S3 integration for applications and migration workflows
Lower long-term power and replacement burden than disk-only retention

ELS100

Compact Optical Storage Appliance

ELS-100 technical summary and deployment notes. Configure with a cache or hot-warm tier for active archive access and optical retention.

Core specifications

Netzon model	HMS2070
Savartus model	ELS-100
Cartridges / media	2 cartridges; 50 media per cartridge; 100 max media
Magazines	n/a
Capacity with 200GB / 500GB / 1TB media	16 TB / 32 TB / 65 TB
Max addressable drives	Up to 4
Power requirements	110-230VAC 50-60Hz
Peak / typical energy consumption	450W / 160W
Dimensions	9.4 x 20.3 x 25.4 in; 240 x 515 x 645 mm
Rack units / max weight	n/a; 79 lb / 36 kg

Integration model

Standard S3 protocol for ingest and application access
Cache/hot-warm tier supports fast reads and restores
Customer-defined write strategies move data to optical
Browser interface supports discovery and restore workflows

Protection & economics

Optical tier preserves original data for long-lived retention
RAID 11+1 optical protection and automatic recovery model
Intelligent sleep/power management reduces ongoing operating cost
Designed to reduce repeated disk refresh cycles

Recommended positioning

ELS-100 is an active archive platform for organizations that need accessible storage today and preservation-grade optical retention for information that must remain trustworthy over time.

ELS500

Rackmount Optical Library

ELS-500 active archive optical storage for secure long-term retention with fast access through cache, browser, and S3 workflows.

Active archive storage tier

Designed to keep important data accessible while preserving it on optical media for resilient long-term storage and lower operating cost.

Standard S3 interface for object-based application integration
Cache or hot-warm tier supports quick access and restore workflows
Optical media provides durable, tamper-resistant long-term retention

374 TB

Max capacity with 1TB media

576

Maximum media

Up to 6

Addressable drives

7U

Footprint

200W

Typical energy

What it is built for

Departmental active archive and secondary storage
Medical imaging, records, evidence, and content libraries
Data center deployments where rack density matters
Storage tiering behind applications using S3

Active archive model

Ingest -> Cache -> Write Strategy -> Optical -> Restore

Savartus keeps users working through the cache or hot-warm tier while write strategies move data to optical storage for durable retention.

Capacity profile

93 TB

Maximum-Capacity Online Optical Library

ELS-10K technical summary and deployment notes. Configure with a cache or hot-warm tier for active archive access and optical retention.

Core specifications

Netzon model	HDL10368
Savartus model	ELS-10K
Cartridges / media	864 cartridges; 12 media per cartridge; 10,368 max media
Magazines	n/a
Capacity with 200GB / 500GB / 1TB media	1,682 TB / 3,363 TB / 6,727 TB
Max addressable drives	Up to 40
Power requirements	110-230VAC 50-60Hz
Peak / typical energy consumption	1500W / 340W
Dimensions	23.6 x 86.6 x 47.2 in; 600 x 2200 x 1200 mm
Rack units / max weight	50U; 1546 lb / 701 kg

Integration model

Standard S3 protocol for ingest and application access
Cache/hot-warm tier supports fast reads and restores
Customer-defined write strategies move data to optical
Browser interface supports discovery and restore workflows

Protection & economics

Optical tier preserves original data for long-lived retention
RAID 11+1 optical protection and automatic recovery model
Intelligent sleep/power management reduces ongoing operating cost
Designed to reduce repeated disk refresh cycles

Recommended positioning

ELS-10K is an active archive platform for organizations that need accessible storage today and preservation-grade optical retention for information that must remain trustworthy over time.

ELS8000-OL

Offline Optical Library

ELS-8000-OL active archive optical storage for secure long-term retention with fast access through cache, browser, and S3 workflows.

Air-gapped optical retention tier

Designed as an offline optical library for deep retention, physical isolation, and controlled recall when paired with Savartus cache or online optical systems.

- Pairs with cache or online ELS systems for active archive workflows
- Supports offline magazines/cartridges for air-gapped retention
- Preserves optical media as the long-lived system of record

6,166 TB

Max capacity with 1TB media

9,504

Maximum media

n/a

Addressable drives

45U

Footprint

50W

Typical energy

What it is built for

- Offline evidence and records retention
- Air-gapped backup copy and cyber recovery
- Long-term preservation of regulated information
- Media vaulting with indexed recall process

Active archive model

Ingest -> Cache -> Write Strategy -> Optical -> Restore

Savartus uses an online/cache tier for ingest, search, and restore, while the offline library protects optical media in an isolated preservation tier.

Capacity profile

1,542 TB

200GB media

3,083 TB

500GB media

6,166 TB

1TB media

Why Savartus ELS

- Air gap reduces exposure to ransomware and accidental deletion
- Optical media supports long-term retention and physical isolation
- Designed to complement online ELS and cache tiers

ELS8000-OL

Offline Optical Library

ELS-8000-OL technical summary and deployment notes. Configure with a cache or hot-warm tier for active archive access and optical retention.

Core specifications

Netzon model	HDL8640 OFF
Savartus model	ELS-8000-OL
Cartridges / media	792 cartridges; 12 media per cartridge; 9,504 max media
Magazines	n/a
Capacity with 200GB / 500GB / 1TB media	1,542 TB / 3,083 TB / 6,166 TB
Max addressable drives	n/a
Power requirements	110-230VAC 50-60Hz
Peak / typical energy consumption	50W / 50W
Dimensions	23.6 x 78.74 x 42 in; 600 x 2000 x 1200 mm
Rack units / max weight	45U; 1378 lb / 625 kg

Integration model

Configured behind or alongside Savartus online/cache tiers
Supports deep retention with offline media management
Retrieval workflow restores required content back to cache
Best used for cold, preserved, or air-gapped copies

Protection & economics

Physical isolation helps reduce cyber and operational risk
Optical media supports durable long-term retention
Low typical power profile for offline preservation tiers
Designed for indexed recall rather than continuous online access

Recommended positioning

ELS-8000-OL is the offline preservation tier for organizations that need optical media physically separated from production systems while still participating in a managed active archive workflow.

ELS10K-OL

Offline Optical Library

ELS-10K-OL active archive optical storage for secure long-term retention with fast access through cache, browser, and S3 workflows.

Air-gapped optical retention tier

Designed as an offline optical library for deep retention, physical isolation, and controlled recall when paired with Savartus cache or online optical systems.

Pairs with cache or online ELS systems for active archive workflows
Supports offline magazines/cartridges for air-gapped retention
Preserves optical media as the long-lived system of record

ELS-10K-OL details shown as capacity-class draft - confirm final offline specifications.
